DETAILED ACTION

Allowable Subject Matter

1. Claims 1-4,8-14,16-22 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record neither discloses nor teaches a method for fabricating a collimate and post diffuse type liquid crystal cell comprising various steps and a collimate and post diffuse type liquid crystal cell comprising various elements as claimed, more specifically, as the following:

the different thickness for the color filter substrate and the TFT array substrate are 0.4 mm and 0.6 mm respectively [claim 1];

the step of providing the thinner of the first and second substrates on a viewer side of the collimate and post diffuse type liquid crystal cell to reduce depixelization and to provide depixelization ratio of less than about 1.6 [claim 9];

the thickness of the color filter substrate is less than the thickness of the TFT array substrate to provide a depixelization ratio of less than about 1.6 [claim 17];

The color filter substrate including a thickness which is less than a thickness of the thin film transistor array substrate to provide a depixelization ratio less than about 2.0 [claim 21];

the step of providing the thinner of the first and second substrates includes the step of providing a depixelization ratio of less than about 2.0; and further the depixelization ratio of less than about 1.6 [claim 22].

Claims 2-4 and 8 are dependent on the claim 1; claims 10-14 and 16 are dependent on claim 9; claims 18-20 are dependent on claim 17.

The closest references AAPA, Shin and Ohkuma disclose a collimate and post diffuse type liquid crystal cell wherein the upper and lower substrates having different thickness and using lapping and polishing to make the substrate thinning, but the prior art of records do not disclose the color filter substrate has 0.4 mm thickness and the TFT array substrate has 0.6 mm thickness as claimed in claim 1; and most references indicate thinning the thickness less than 0.5 mm would be very difficult, because more thin substrate would be very easy to be broken and get cracks. The prior art of records also do not disclose the thinner color filter substrate and the thicker TFT array substrate would provide a depixelization ratio of less than about 2.0 and 1.6 as claimed in claims 9,17,21 and 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
